Order No	Established Time	Question	Suggestion	Files	Answer	Completed
H2W-678731P	1/19/2026 9:42:18 AM	At the highlighted area, the designed through-hole diameter is 0.9 mm, with a hole-to-hole spacing of 0.37 mm. According to our manufacturing capability, the minimum copper-to-copper edge spacing between holes is 0.5 mm. We suggest reducing the 0.9 mm hole to 0.8 mm (finished hole size controlled at 0.8 mm ± 0.075 mm). Please confirm.	1)Accept the finished hole size of 0.8 mm ± 0.075 mm 2)Modify the design files and redesign accordingly	 (https://jpf1e1oss-accelerate.aliyuncs.com/pcb/engineer/2026/1/19/2026011908145154196416.png)	1/19/2026 8:55:09 PM I accept your suggestion, please continue.	2026-01-1
